Name:_____

The Bubbly Experiment

context clues POV

My class gathered around the long wooden table in science class. Mr. Davis poured red liquid into a plastic volcano model. I stood near the front, clutching my pencil tightly as my heart fluttered with excitement. I had been waiting for this science lesson all week!

"Watch closely, everyone," Mr. Davis announced with a grin.

He added two spoonfuls of white baking soda to the red liquid. Suddenly, thick pink foam overflowed from the top, spilling down the sides and filling the tray below.

"It's erupting!" I shouted, clapping my hands. I couldn't wait to write down every detail in my science notebook.

1. From which point of view is the story told?

A. First-person point of view, told by a student in the science class

B. First-person point of view, told by Mr. Davis

C. Third-person point of view, told by an outside narrator

D. Third-person point of view, told from the volcano's perspective

3. Read these sentences from paragraph 3:

"Suddenly, thick pink foam **overflowed** from the top, spilling down the sides and filling the tray below."

Which clue from the sentence best helps the reader understand the meaning of **overflowed?**

A. "pink foam"

B. "added two spoonfuls"

C. "spilling down the sides"

D. "white baking soda"
