## Video Games

In the 1950s, people started creating the first video games. They were very basic and played on enormous computers. These games were simple and had no colors or cool sounds like today's games.

One of the earliest games was Pong, where two players bounced a ball back and forth using paddles. It was a big hit and brought a lot of joy to people playing it.

As time passed, arcade games became famous. Games like Pac-Man and Space Invaders filled arcades and brought kids and adults together to play and have fun.

Soon, companies made game consoles for homes. The Atari and Nintendo consoles let people play games like Super Mario Bros., The Legend of Zelda, and Donkey Kong without going to arcades.

As technology improved, so did video games. They became more colorful, with better graphics and sounds. Games started to tell stories and take players on incredible adventures.

Today, we have amazing video games we can play on computers, phones, and tablets. Some games let us explore imaginary worlds, solve puzzles, or race cars. They're more realistic and exciting than ever before!

Now, there's virtual reality! Players wear special goggles and feel like they're inside the game. Who knows what incredible games the future will bring?

1. In which decade did people start creating the first video games?
  - A. 1960s
  - B. 1970s
  - C. 1980s
  - D. 1990s
2. What was one of the earliest video games where two players bounced a ball back and forth using paddles?
  - A. Super Mario Bros.
  - B. Pac-Man
  - C. Space Invaders
  - D. Pong
3. What were the Atari and Nintendo consoles used for?
  - A. Playing games at arcades
  - B. Playing games on computers
  - C. Playing games at home
  - D. Playing games on phones
